

STOP CORONA

Stopping Corona (COVID-19) is a global imperative. Through vaccination, hygiene practices, and responsible behavior, we can protect ourselves and our communities. Combining scientific knowledge with individual responsibility, we can mitigate the spread of the virus and ultimately overcome this pandemic, ensuring a safer and healthier future for all.

Are You Effected?

About CORONA VIRUS

COVID-19 is believed to have originated in a seafood market in Wuhan, China, in late 2019. The virus likely passed from bats to humans through an intermediate host species. Its rapid spread led to a global pandemic, underscoring the need for vigilance in monitoring zoonotic diseases.

The COVID-19 pandemic is believed to have originated in a seafood market in Wuhan, Hubei province, China, in late 2019. The virus is thought to have been transmitted from animals to humans, with bats possibly serving as the original host species.

The virus subsequently spread to other parts of China and eventually to other countries, leading to a global pandemic. This zoonotic transmission event highlights the importance of monitoring and addressing diseases that can jump from animals to humans.

Symptoms

CORONA EFFECTED

Common symptoms of COVID-19, caused by the SARS-CoV-2 virus, vary in severity but generally include:

1. Fever and Chills
2. Cough
3. Shortness of Breath
4. Fatigue
5. Muscle or Body Aches
6. Headache

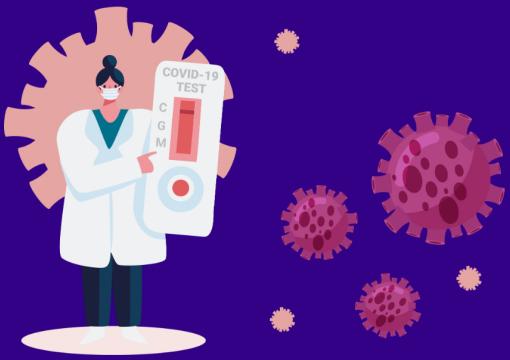

7. Sore Throat
8. Loss of Taste or Smell
9. Congestion or Runny Nose
10. Gastrointestinal Symptoms

If you or someone you know experiences symptoms or has been in close contact with a confirmed case, seek medical advice, and follow local health guidelines to prevent the spread of the virus.

Prevention IF CORONA EFFECTED

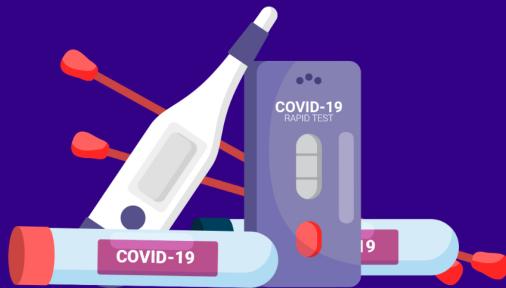

Preventing the spread of COVID-19, whether you are already infected or trying to avoid infection, is crucial to protect yourself and others. Here are key measures to take:

1. Isolate and Inform
2. Follow Medical Guidance
3. Stay Home
4. Mask Up
5. Hand Hygiene
6. Physical Distancing
7. Avoid Large Gatherings
8. Vaccination
9. Good Respiratory Hygiene
10. Clean and Disinfect
11. Monitor Your Health
12. Follow Local Guidelines

Remember that preventing the spread of COVID-19 requires collective effort. By following these measures, you can contribute to controlling the pandemic and protecting yourself and your community.

Treatments CORONA VIRUS

COVID-19 treatment varies based on the severity of symptoms. Mild cases may require rest, fluids, and over-the-counter medications. Moderate cases may need oxygen therapy. Severe cases might necessitate hospitalization with advanced respiratory support. Vaccination and preventive measures remain crucial in reducing the virus's impact. Consult a healthcare professional for guidance.

FAQ Frequently Ask Question

Q: What should I do if I've been in contact with a COVID-19 positive person?

A: If you've been exposed, quarantine and get tested. Follow local health guidelines for isolation duration and

monitor for symptoms.

Q: Can COVID-19 be transmitted from pets?

A: While rare, there have been instances of pets testing positive for the virus. It's essential to practice good hygiene, including handwashing, around pets if you're infected. Consult your veterinarian for guidance.

These FAQs provide basic information about COVID-19, but it's important to refer to authoritative sources for the most up-to-date and region-specific guidance.
